EDUCATION

BSc Engineering (Hons) in Electrical & Electronic

SLIIT — Graduated 2026

CGPA: 3.24 / 4.00

C/ Hindu College, Colombo (Bambalapitiya)

G.C.E. A/L (2021): 2C, 1S

G.C.E. O/L (2017): 7A, 1B, 1C

TECHNICAL SKILLS

- Java (OOP)
- C++
- Assembly Language
- Ladder Logic
- Proteus
- Multisim
- PowerWorld Simulator
- PCB Design
- MATLAB
- COMSOL
- Quartus
- WeBot
- FluidSim
- LabVIEW
- KiCad

LOGENDRA PIRATHEEP

ELECTRICAL & ELECTRONIC ENGINEER | BSc Engineering (Hons) in Electrical & Electronic Engineering, Sri Lanka Institute of Information Technology (SLIIT)

PROFILE

Ambitious and highly motivated Electrical and Electronic Engineering graduate with a BSc Engineering (Hons) in Electrical & Electronic Engineering from the Sri Lanka Institute of Information Technology (SLIIT), who has completed all academic examinations and successfully defended a final-year research project. Completed two 15-week industrial training placements — most recently as an Electronic Engineer Intern at SLT Digital Lab (2025) and previously as a Trainee Engineer at the Ceylon Electricity Board (CEB) (2024) — gaining practical exposure to electronic systems, power systems, and utility engineering. Practical, project-driven background spanning circuit design, PCB simulation, embedded systems, power system analysis, and simulation tools such as PowerWorld, COMSOL, Quartus, LabVIEW, and KiCad. Proven leadership, teamwork, and negotiation abilities developed through active roles in student societies, sports, and community organizations. Seeking to bring strong analytical skills, technical versatility, and a collaborative mindset to an entry-level Electrical/Electronic Engineering role.

EXPERIENCE

Electronic Engineer Intern | SLT Digital Lab

June 6, 2025 – September 5, 2025 (15 weeks) • Sri Lanka

- Completed a 15-week industrial training placement, gaining hands-on experience in electronic systems and digital-lab engineering practices within a live commercial environment.
- Applied academic knowledge of embedded systems and circuit design to real-world development and testing tasks.

Trainee Engineer | Ceylon Electricity Board (CEB)

June 10, 2024 – September 9, 2024 (15 weeks) • Sri Lanka

- Completed a rigorous 15-week industrial training program, gaining hands-on exposure to high-voltage power generation, transmission networks, and electrical distribution operations.
- Applied foundational classroom knowledge of power system analysis, load flow, and safety SOPs to real-world utility engineering scenarios.

ACADEMIC PERFORMANCE

Semester	GPA	Semester	GPA
1st Year 1st Sem	3.09	3rd Year 1st Sem	3.51
1st Year 2nd Sem	3.54	3rd Year 2nd Sem	2.86
2nd Year 1st Sem	3.28	4th Year 1st Sem	3.65
2nd Year 2nd Sem	3.07	4th Year 2nd Sem	3.10

Cumulative GPA (CGPA): 3.24 / 4.00

SOFT SKILLS

- Leadership
- Teamwork & Collaboration
- Creative Problem Solving
- Presentation & Communication
- Negotiation

LANGUAGES

Tamil — Native

English — Full Professional

CERTIFICATIONS

Royal Institute, Colombo — British Council (Mar 2011–2012)

Key English Test (KET) — Passed

Preliminary English Test (PET) — Completed

Young Learners English Course — Passed

Explorer Coding Program, American Center (ACC)

ORGANIZATIONS

IEEE Student Branch, SLIIT — *2023 - 2026*

Rotaract Club of SLIIT — *2025-2026*

Leo Club — Committee / In Charge — *2014–2020*

St. John Ambulance Cadet — *2013–2020*

Interact Club — *2015–2020*

Science Union — *2017–2020*

Tamil Union — *2015–2020*

Maths Union — *2015–2020*

Shotokan Karate-Do Int'l Fed., SL — *2014–2015*

Junior Prefect, C/ Hindu College — *2012–2017*

SPORTS

- Inter House Sports Meet (2008) — Runner Up, Race
- Shotokan Karate-Do Int'l Fed., SL — 10th Kyu
- Shotokan Karate-Do Int'l Fed., SL — 9th Kyu

ACADEMIC & LABORATORY PROJECTS

Non-Invasive Heart Health Monitoring System (Final Year Project)

- Designed a non-invasive monitoring system to track key heart health indicators, combining sensor hardware with embedded data processing.

Smart Light Automation using ESP-01 Module (Hardware)

- Developed a Wi-Fi-based automation system by integrating an ESP-01 module to control an AC bulb remotely via a mobile application.

Obstacle Avoiding Car using Arduino (Hardware)

- Designed and built an Arduino-based obstacle-avoiding car, integrating sensor input with real-time motor control logic.

Three-Phase Power System Analysis

- Simulated extensive load flows, symmetric/asymmetric faults, and system transmission limits using PowerWorld Simulator to optimize system dispatch safety.

BJT Audio Amplifier Design

- Engineered and simulated a complete multi-stage Bipolar Junction Transistor audio amplifier, including custom PCB schematic design layouts.

2nd Order Active High-Pass Filter

- Designed, analyzed, and soldered a physical hardware circuit with validated frequency response outputs.

Digital Logic System

- Designed a comprehensive digital logic system using combinational logic circuit structures in schematic simulation software.

Analog Comparator Circuit

- Simulated a high-speed analog comparator circuit with customized threshold and reference voltage characteristics.

Capacitance Multiplier Circuit

- Designed, verified, and simulated a capacitance multiplier circuit for smooth supply filtering with a minimized hardware footprint.

12V DC Regulated Power Supply

- Architected, assembled, and tested a fully physical regulated power supply, including transformer stepping, bridge rectification, and voltage stabilization.

Employee Management System (Java OOP)

- Coded a robust desktop-based management program utilizing OOP architectures, clean design patterns, and relational database connections.

Car Park Management System (C++)

- Built an object-oriented software system implementing inheritance, polymorphism, and memory management.
